This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software" or "commercial computer software documentation" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

If this document is in public or private pre-General Availability status:

This documentation is in pre-General Availability status and is intended for demonstration and preliminary use only. It may not be specific to the hardware on which you are using the software. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to this documentation and will not be responsible for any loss, costs, or damages incurred due to the use of this documentation.

If this document is in private pre-General Availability status:

The information contained in this document is for informational sharing purposes only and should be considered in your capacity as a customer advisory board member or pursuant to your pre-General Availability trial agreement only. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, timing, and pricing of any features or functionality described in this document may change and remains at the sole discretion of Oracle.

This document in any form, software or printed matter, contains proprietary information that is the exclusive property of Oracle. Your access to and use of this confidential material is subject to the terms and conditions of your Oracle Master Agreement, Oracle License and Services Agreement, Oracle PartnerNetwork Agreement, Oracle distribution agreement, or other license agreement which has been executed by you and Oracle and with which you agree to comply. This document and information contained herein may not be disclosed, copied, reproduced, or distributed to anyone outside Oracle without prior written consent of Oracle. This document is not part of your license agreement nor can it be incorporated into any contractual agreement with Oracle or its subsidiaries or affiliates.

#### Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>

#### Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

#### **Sample Code**

Oracle may provide sample code in SuiteAnswers, the Help Center, User Guides, or elsewhere through help links. All such sample code is provided "as is" and "as available", for use only with an authorized NetSuite Service account, and is made available as a SuiteCloud Technology subject to the SuiteCloud Terms of Service at [www.netsuite.com/tos](http://www.netsuite.com/tos), where the term "Service" shall mean the OpenAir Service.

Oracle may modify or remove sample code at any time without notice.

#### **No Excessive Use of the Service**

As the Service is a multi-tenant service offering on shared databases, Customer may not use the Service in excess of limits or thresholds that Oracle considers commercially reasonable for the Service. If Oracle reasonably concludes that a Customer's use is excessive and/or will cause immediate or ongoing performance issues for one or more of Oracle's other customers, Oracle may slow down or throttle Customer's excess use until such time that Customer's use stays within reasonable limits. If Customer's particular usage pattern requires a higher limit or threshold, then the Customer should procure a subscription to the Service that accommodates a higher limit and/or threshold that more effectively aligns with the Customer's actual usage pattern.

# Database Guide Overview

The OpenAir Database Guide provides a high-level description of the OpenAir database as viewed through the OpenAir REST, SOAP or XML API, OpenAir user scripting NSOA.wsapi functions and OpenAir Integration Manager.

**Important:** This guide does not describe the physical database, and does not describe the features provided to protect the security, privacy, and integrity of your OpenAir data.

For more information about security features, see  [OpenAir Security Guide](#).

This guide provides entity relationship (ER) diagrams for most record types (database tables) in OpenAir. See [Entity-Relationship Diagrams](#).

- For a list of ER diagrams categorized by business area, see [Index of Entity-Relationship Diagrams by Data Area](#).
- For a list of tables described in the data dictionary and corresponding ER diagrams, see [Index of Tables and Entity-Relationship Diagrams](#).
- The ER diagrams use Crow's foot notation. For information about ER models and Crow's foot notation, see [Entity-relationship model](#).
- The ER diagrams provide an overview only. They do not show all the fields (columns) for each record type (database table) and do not show all relationships between tables. For detailed information, consult the OpenAir data dictionary. Each ER diagram is accompanied by a table with links to related ER diagrams in this guide and to table descriptions in the OpenAir data dictionary.

[Go to OpenAir Data Dictionary](#).

**Note:** Unless you are viewing this help topic in the OpenAir Help Center, links to the data dictionary use the generic OpenAir domain for production accounts ([www.openair.com](http://www.openair.com)). In some instances, you may need to replace the generic domain name with your account-specific domain name in the link URLs.

- To view the OpenAir Data Dictionary, use the following URL:  
`https://<account-domain>/database/single_user.html`, where <account-domain> is the account-specific domain for your account.
- To view the details of a specific table, append a hash symbol # followed by the table name to the end of the data dictionary URL.  
For example, use `https://<account-domain>/database/single_user.html#project` to view the details of the Project table.

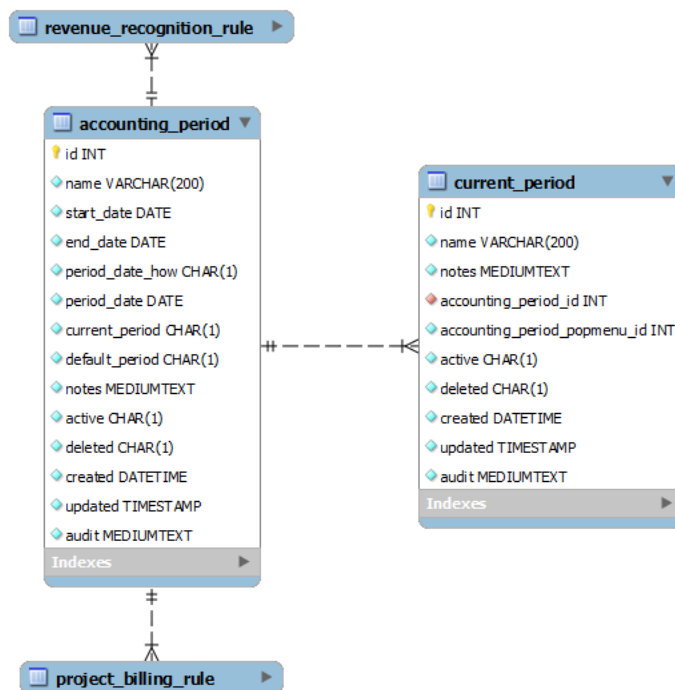

For more information about your account-specific domain name, see the help topic [Use Account-Specific Domain](#).

# Entity-Relationship Diagrams

This guide provides entity relationship (ER) diagrams for most record types (database tables) in OpenAir.

- For a list of ER diagrams categorized by business area, see [Index of Entity-Relationship Diagrams by Data Area](#).
- For a list of tables described in the data dictionary and corresponding ER diagrams, see [Index of Tables and Entity-Relationship Diagrams](#).

## Accounting Period

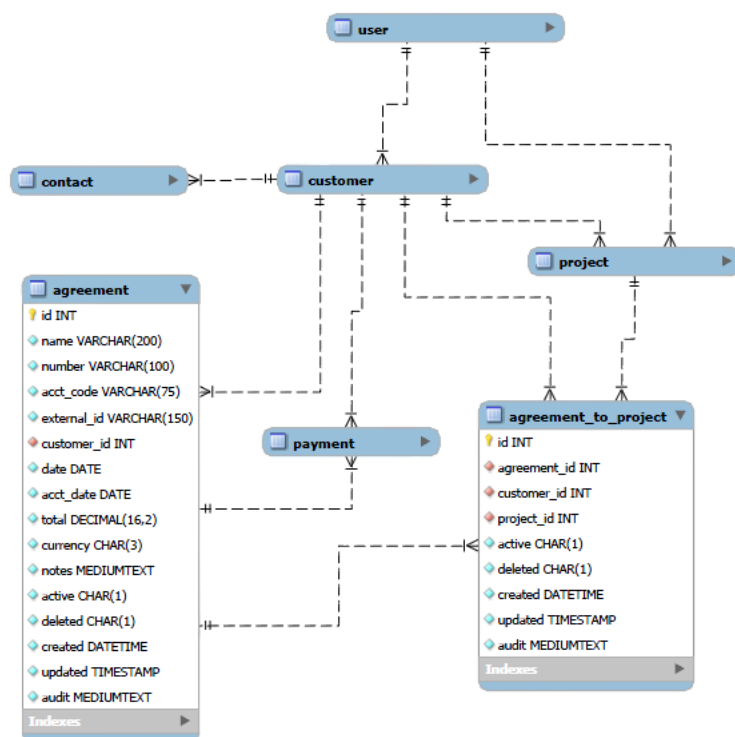

**Note:** Unless you are viewing this help topic in the OpenAir Help Center, links to the data dictionary use the generic OpenAir domain for production accounts ([www.openair.com](http://www.openair.com)). In some instances, you may need to replace the generic domain name with your account-specific domain name in the link URLs.

- To view the OpenAir Data Dictionary, use the following URL:  
[https://<account-domain>/database/single\\_user.html](https://<account-domain>/database/single_user.html), where <account-domain> is the account-specific domain for your account.
- To view the details of a specific table, append a hash symbol # followed by the table name to the end of the data dictionary URL.  
 For example, use [https://<account-domain>/database/single\\_user.html#project](https://<account-domain>/database/single_user.html#project) to view the details of the Project table.

For more information about your account-specific domain name, see the help topic [Use Account-Specific Domain](#).

## Agreement

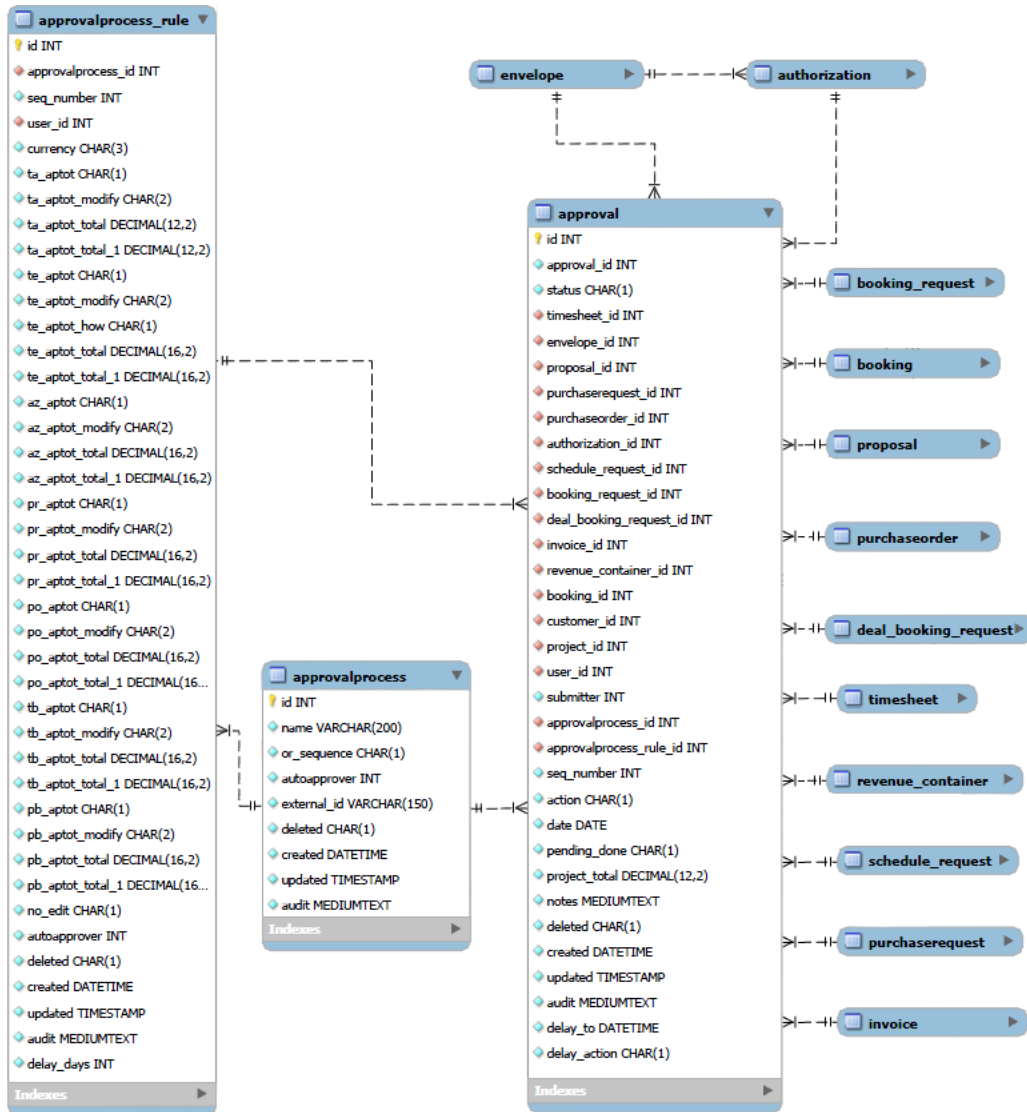

**Note:** Unless you are viewing this help topic in the OpenAir Help Center, links to the data dictionary use the generic OpenAir domain for production accounts ([www.openair.com](http://www.openair.com)). In some instances, you may need to replace the generic domain name with your account-specific domain name in the link URLs.

- To view the OpenAir Data Dictionary, use the following URL:  
[https://<account-domain>/database/single\\_user.html](https://<account-domain>/database/single_user.html), where <account-domain> is the account-specific domain for your account.
- To view the details of a specific table, append a hash symbol # followed by the table name to the end of the data dictionary URL.  
 For example, use [https://<account-domain>/database/single\\_user.html#project](https://<account-domain>/database/single_user.html#project) to view the details of the Project table.

For more information about your account-specific domain name, see the help topic [Use Account-Specific Domain](#).

Data Dictionary	Related Diagrams
<a href="#">agreement</a> , <a href="#">agreement_to_project</a>	<a href="#">Billing</a> , <a href="#">Project</a> , <a href="#">Revenue Container</a>

# Approval Process

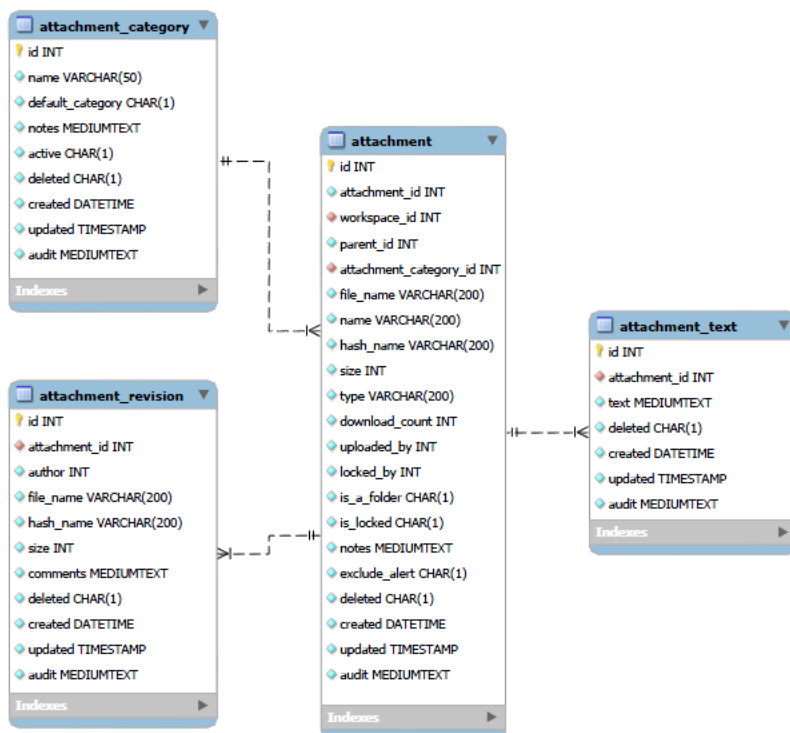

**Note:** Unless you are viewing this help topic in the OpenAir Help Center, links to the data dictionary use the generic OpenAir domain for production accounts ([www.openair.com](http://www.openair.com)). In some instances, you may need to replace the generic domain name with your account-specific domain name in the link URLs.

- To view the OpenAir Data Dictionary, use the following URL:  
[https://<account-domain>/database/single\\_user.html](https://<account-domain>/database/single_user.html), where <account-domain> is the account-specific domain for your account.
- To view the details of a specific table, append a hash symbol # followed by the table name to the end of the data dictionary URL.  
 For example, use [https://<account-domain>/database/single\\_user.html#project](https://<account-domain>/database/single_user.html#project) to view the details of the Project table.

For more information about your account-specific domain name, see the help topic [Use Account-Specific Domain](#).

# Index of Entity-Relationship Diagrams by Data Area

At the highest level, OpenAir data can be categorized by business area. The following diagram summarizes the different business data areas.

The following tables lists the ER diagrams for record types in the different data areas.

**Note:** Unless you are viewing this help topic in the OpenAir Help Center, links to the data dictionary use the generic OpenAir domain for production accounts ([www.openair.com](http://www.openair.com)). In some instances, you may need to replace the generic domain name with your account-specific domain name in the link URLs.

- To view the OpenAir Data Dictionary, use the following URL:  
`https://<account-domain>/database/single_user.html`, where `<account-domain>` is the account-specific domain for your account.
- To view the details of a specific table, append a hash symbol # followed by the table name to the end of the data dictionary URL.  
For example, use `https://<account-domain>/database/single_user.html#project` to view the details of the Project table.

For more information about your account-specific domain name, see the help topic [Use Account-Specific Domain](#).
